

# Consultants' Update for Spotted Wing Drosophila and Brown Marmorated Stink Bug

April 25, 2013  
10:00 a.m. to 2:00 p.m.  
Lab Services Building  
95 Stone Road, Guelph, Ontario

Spotted wing drosophila (SWD) and brown marmorated stink bug (BMSB) are invasive pests that have or will have an impact on horticultural crops in Ontario. OMAF and MRA specialists along with University of Guelph and Vineland Research and Innovation Centre have been investigating these pests for several years. We would like to share with horticulture consultants what we have found.

Please join us on **April 25** in Guelph to discuss and learn about these two important insect pests.

## Meeting Highlights

- Biology and life cycle of Spotted Wing Drosophila and Brown Marmorated Stink Bug
- What we have learned in 2012
- Identification of Spotted Wing Drosophila and Brown Marmorated Stink Bug
- Hands-on techniques for identifying and monitoring Spotted Wing Drosophila with live samples
- Management options

## **Registration is required**
